

Mobile Scale MWS

The simple way to weigh heavy loads

- ✓ Large and illuminated display
- ✓ Integrated rechargeable battery system
- ✓ Loads up to 50t per scale are possible
- ✓ Optional radio equipment - send and sum the weight of up to four scales!

Advantages

The mobile scale MWS makes heavy duty weighing a child's play:

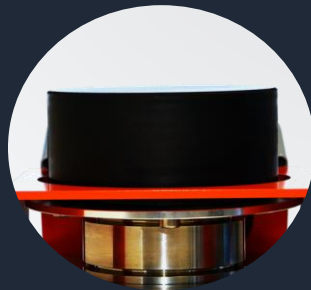

Simply place the mobile scales on the support points of the goods, set down the goods, read the weight at the display, done!

The large elastomer bearing guarantees a safe support surface for your load and precisely transmits the weight force to the measuring unit. Thanks to a powerful and integrated Li-Ion battery, there is no need for any cable connections to set up the scales. The large and illuminated display shows the weight precisely and can be read from a safe distance. For even more comfort, the weight values of up to four MWS scales can optionally be transmitted via radio to a data receiver and summed up. The MWS is extremely compact and can be transported by hand with the practical carrying handles.

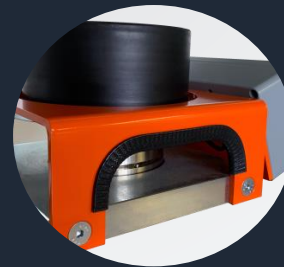

Product details

Large and illuminated display

Elastomer bearing absorbs heavy shocks

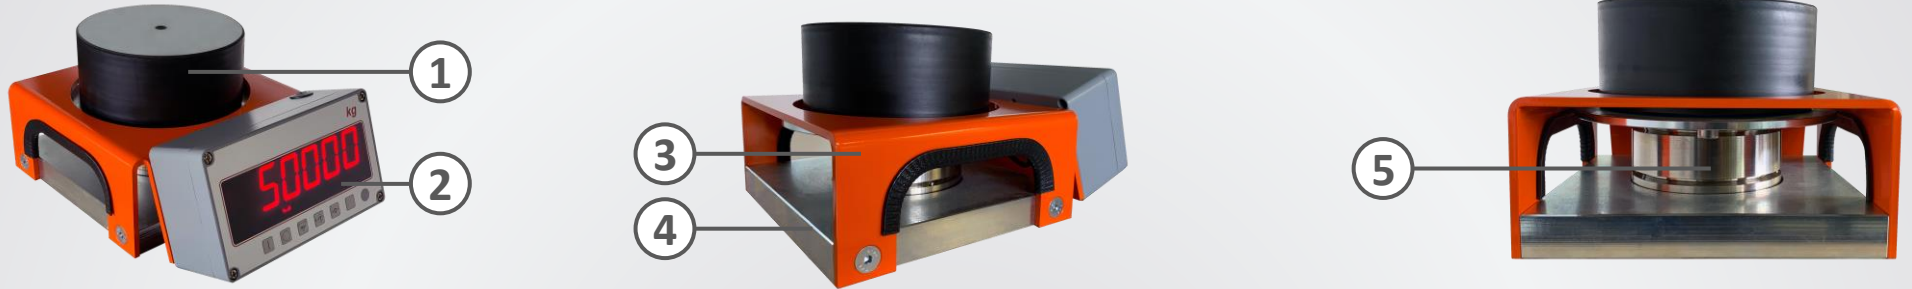

Carrying handles for an easy transport

Battery runtime >45h

Technical data MWS

(1) Elastomer bearing safely absorbs load shocks (2) Front panel with large and illuminated display (3) Lift-off protection with practical carrying handles (4) Stainless steel support plate (5) EHP compression load cell (<0,03% tolerance)

Available load capacities	10t, 30t or 50t each MWS (other capacities on request)	Nominal temperature range	-30°C to +85°C	CE-M certification	possible
Dimensions	37x25x20cm	Protection class load cell	IP67	Battery	12V-Li Ion (>45h runtime)

Examples of use

**Weighing of a 150t turbine with
4x MWS 50t**

**Weighing of a 100t press element
with 4x MWS 30t**
